Dear Doctor,

Re: Rachael Young, 12 Anderson Rd, Sticksville, 4812

Thank you for seeing this 26 year old nulligravid lady in the emergency gynaecology clinic today. She has a previous history of chlamydia infection and now complains of a 48 hour history of pelvic pain associated with an intermittent vaginal discharge.

I examined her this morning and found her to be generally tender throughout the pelvis and I sent off some swabs to rule out infection. She is using the Pill for contraception and is otherwise fit and well.

Kind regards,

Dr George Parks
